

Manufacturing

Overview

Our manufacturing industry attorneys provide coordinated, comprehensive legal counsel to manufacturers on strategic, operational, financial, regulatory and day-to-day business issues.

Using a team approach, attorneys in particular practice areas remain sensitive to the need for quick, effective, practical solutions and call upon the guidance of other team members needed to tackle each unique challenge your business may encounter.

Bond attorneys serve a broad range of both established and start-up manufacturers in a vast array of industries, with a significant level of experience serving clients in, among others:

- Computer and Electronic Products and Equipment;
- Machinery;
- Fabricated Metals;
- Chemicals;
- Plastics and Rubber Products;
- Pharmaceutical Medicine and Preparation;
- Surgical and Medical Equipment;
- Food and Kindred Products; and
- Paper Manufacturing

Our clients range from an international aerospace and defense manufacturer and publicly-held motion control manufacturer to an installer and wholesale distributor of photovoltaic solar components and a sophisticated producer of industrial and medical oxygen equipment – and everything in between. We pride ourselves on a thorough understanding of each client's unique business and the particular industry in which it operates, since we are acutely aware that legal problems do not exist in a vacuum but rather can be best solved only by considering the broader commercial context in which they are presented and the competitive objectives sought to be achieved.

Whatever your business's particular needs and challenges may be, we would consider ourselves privileged to provide the legal experience you need to prosper in an ever-evolving marketplace – not just as your trusted advisors, but as true partners in your success. Let us put the depth of our experience in the manufacturing sector to work for you.
