

## New York's Cluster Zones: Frequently Asked Questions UPDATE (11/12)

There have been significant changes to New York's cluster action initiative. Gov. Andrew Cuomo has updated guidance about how cluster zones are designated and how the cluster zone designation may be changed. Further, the governor has updated the already existing cluster zones and added new cluster zones in Erie, Monroe, Onondaga and Tioga counties as well as Staten Island. Below, we discuss frequently asked questions about the clusters and updated maps for the cluster zones.

### What are the current cluster zones?

On November 11, Gov. Cuomo updated the cluster zones. There are now 13 active cluster zones in New York state.

#### New York Clusters:

1. Brooklyn's cluster is now an orange and a yellow zone. You may view the cluster on [this map](#).
2. The Broome County cluster, which can be seen on [this map](#), is a yellow zone only. It includes parts of Binghamton, Johnson City, Endicott, Endwell and Vestal.
3. Chemung County has an orange and a yellow zone, centering on Elmira and Horseheads. The map of the Chemung cluster may be found [here](#).
4. Erie County has an expansive yellow cluster, stretching from its northern border with Niagara County beyond the town of Hamburg. It includes Buffalo and many of its suburbs. The map of this cluster may be found [here](#).
5. The Monroe County yellow cluster is also expansive. It stretches down from Lake Ontario and beyond the town of Henrietta. The map of the Monroe cluster may be found [here](#).
6. The Onondaga County cluster is also a yellow zone. It stretches from Syracuse to the border of Oswego County. The map may be found [here](#).
7. The Orange County cluster is now solely a yellow zone. The map may be found [here](#).
8. Queens' Forest Hills cluster, which is a yellow zone, may be found [here](#).
9. The Rockland County cluster is an orange and yellow zone. The map of the cluster may be found [here](#).
10. The Steuben County cluster centers on Corning and extends partially into Chemung County. It is a yellow zone, and the map may be found [here](#).
11. Staten Island now has an expansive yellow zone. It covers most of the island. The map may be found [here](#).
12. Tioga County's yellow zone is relatively small, focusing on the town of Waverly along the New York and Pennsylvania border. The map may be found [here](#).
13. Westchester County's yellow and orange zone covers the Port Chester area along the Connecticut border. The map may be found [here](#).

### When do the cluster zone restrictions take effect?

When the cluster zone restrictions take effect appears to vary based on locality. Executive Order 202.68 provides that the original cluster zone designations must take effect no later than the Friday following the designation, but that localities may choose to have the cluster designation take effect sooner.

### What are the different cluster zone restrictions?

There are different restrictions in place depending on the color of the zone.

Red zones restrictions are similar to the initial days of New York Pause. Red zone restrictions are:

- No non-essential gatherings of any size may take place.
- All non-essential businesses must reduce the in-person workforce by 100%.
- All houses of worship must reduce their capacity to the **lesser of** 25% of maximum occupancy or 10 people.
- All restaurants or taverns must close in-person service but may remain open for takeout or delivery.
- All schools must go to remote learning but may follow the state's guidelines for red and orange zones that allow the school to reopen for in-person classes under strict protocols. Such guidance may be found [here](#).

Orange zones have the following restrictions:

- All non-essential gatherings must be limited to 10 people.
- Some non-essential businesses may reopen, but others, including gyms, fitness centers or classes, barbers, hair salons, spas, tattoo or piercing parlors, nail technicians and nail salons, cosmetologists, estheticians, the provision of laser hair removal and electrolysis, and all other personal care services, must reduce their in-person workforce by 100%.
- All houses of worship must reduce their capacity to the **lesser of** 33% of maximum occupancy or 25 people.
- All restaurants or taverns must close indoor dining. Outdoor dining is allowed, but every table must be limited to four people. Takeout and delivery may still operate.
- All schools must go to remote learning but may follow the state's guidelines for red and orange zones that allow the school to reopen for in-person classes under strict protocols. Such guidance may be found [here](#).

Yellow zones have the following restrictions:

- Non-essential gatherings are limited to no more than 25 people.
- Houses of worship are subject to a capacity limit of 50% of its maximum occupancy and shall adhere to Department of Health guidance.
- Restaurants and taverns must limit any one seated group or party size to 4 people.
- Schools open for in-person instruction in yellow zones must follow guidance regarding testing (which may be found [here](#)).

Please note: non-essential gatherings are defined by Executive Order 202.14 as "parties, celebrations, games, meetings or other social events."

### How are cluster zones designated?

According to a press release issued by the governor’s office on October 21, 2020 (which may be found [here](#)), there are different “target metrics” for entering a cluster zone based on geographic area. The chart below details the metrics released by the Governor’s office:

Geographic Area	Yellow Zone Metrics	Orange Zone Metrics	Red Zone Metrics
<p><b>Tier 1</b> Geographic area (ZIP, census tract, etc.) is located within a county of 900,000 or more people or located within city of 90,000 or more people.</p> <p>Tier 1 areas: NYC boroughs; Nassau, Suffolk, Westchester, Erie counties; cities of Buffalo, Rochester, Syracuse, Albany, Yonkers</p>	<p>Geographic area has 7-day rolling average positivity &gt; 2.5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 10 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 3% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 10 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 4% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 10 or more new daily cases per 100,000 residents on 7-day average</p>
<p><b>Tier 2</b> Geographic area (ZIP, census tract, etc.) is located within a county of 150,000 or more people (and jurisdiction is not included in Tier 1).</p> <p>Tier 2 counties: Monroe; Onondaga; Orange; Rockland; Albany; Dutchess; Saratoga; Oneida; Niagara; Broome; Ulster; Rensselaer; and Schenectady</p>	<p>Geographic area has 7-day rolling average positivity &gt; 3% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 12 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 4% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 12 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 12 or more new daily cases per 100,000 residents on 7-day average</p>
<p><b>Tier 3</b> Geographic area (ZIP, census tract, etc.) is located within a county of 50,000 or more people.</p> <p>Tier 3 Counties: Chautauqua; Oswego; Jefferson; Ontario; St. Lawrence; Tompkins; Putnam; Steuben; Wayne; Chemung; Clinton; Cayuga; Cattaraugus; Sullivan; Madison; Warren; Livingston; Herkimer; Washington; Otsego; Columbia; Genesee; Fulton; Franklin</p>	<p>Geographic area has 7-day rolling average positivity &gt; 3.5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 4.5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 5.5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>

<p><b>Tier 4</b> Geographic area (ZIP, census tract, etc.) is located within a county of less than 50,000 people</p> <p>Tier 4 Counties: Montgomery; Tioga; Cortland; Chenango; Greene; Allegany; Delaware; Orleans; Wyoming; Essex; Seneca; Schoharie; Lewis; Yates; Schuylar; Hamilton</p>	<p>Geographic area has 7-day rolling average positivity &gt; 4% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 5% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>	<p>Geographic area has 7-day rolling average positivity &gt; 6% for 10 days</p> <p><u>AND</u></p> <p>Geographic area has 15 or more new daily cases per 100,000 residents on 7-day average</p>
--	--	--	--

In addition, there are other factors the state must consider when designating a cluster in **all** areas of the state.

1. Whether the geographic area has a minimum of five new cases per day on seven-day average for geographic areas with 10,000 or more residents or a minimum of three new cases on seven-day average per day for areas with less than 10,000 residents; and
2. Whether the increase in positive cases or positivity reflect community spread and cannot be mostly explained by a cluster in a single institution (e.g. nursing home, factory, college, etc.) or household transmission; and
3. Whether the State Department of Health (DOH), in consultation with the local department of health, finds that based on the above listed metrics, and other epidemiological factors, including an upward trend in total and daily hospital admissions, that a zone designation is appropriate.

### How does an area exit a cluster zone?

Fourteen days after a cluster zone is designated, DOH, in coordination with the local department of health, must determine whether the area has successfully reduced the viral spread enough to either receive a new cluster designation or exit the zone entirely. The factors that DOH must examine are as follows:

Geographic Area	Exiting Yellow Zone Metrics	Exiting Orange Zone Metrics	Exiting Red Zone Metrics
<p><b>Tier 1</b> Geographic area (ZIP, census tract, etc.) is located within a county of 900,000 or more people or located within city of 90,000 or more people.</p> <p>Tier 1 areas: NYC boroughs; Nassau, Suffolk, Westchester, Erie counties; cities of Buffalo, Rochester, Syracuse, Albany, Yonkers</p>	<p>Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity &lt; 1.5% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.</p>	<p>Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity &lt; 2% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.</p>	<p>Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity &lt; 3% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.</p>

Tiers 2, 3, 4 Counties: Monroe; Onondaga; Orange; Rockland; Albany; Dutchess; Saratoga; Oneida; Niagara; Broome; Ulster; Rensselaer; Schenectady; Chautauqua; Oswego; Jefferson; Ontario; St. Lawrence; Tompkins; Putnam; Steuben; Wayne; Chemung; Clinton; Cayuga; Cattaraugus; Sullivan; Madison; Warren; Livingston; Herkimer; Washington; Otsego; Columbia; Genesee; Fulton; Franklin; Montgomery; Tioga; Cortland; Chenango; Greene; Allegany; Delaware; Orleans; Wyoming; Essex; Seneca; Schoharie; Lewis; Yates; Schuyler; Hamilton	Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity < 2% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.	Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity < 3% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.	Geographic area demonstrates decline in positivity (daily 7-day rolling average) over 10-day period AND has positivity < 4% (7-day rolling average) for at least 3 consecutive days at end of 10-day period.
--	--	--	--

In addition, DOH may consider the following factors before a new zone designation may occur:

1. trends in the daily hospital admissions from the geographic area;
2. a finding that new cases are tied to a specific congregate facility, or defined cluster;
3. increased compliance and enforcement actions taken by local government; or
4. community cooperation to reduce viral spread.

### What happens when an area exits a cluster zone?

Currently, there is not much guidance about the next steps when an area exits a cluster zone. According to a [tweet](#) from Melissa DeRosa, the secretary to the governor, businesses shifting to yellow zones from a red zone may reopen the day after the designation occurs. Remember, some businesses must continue to remain closed in yellow zones.
